

GAP ANALYSIS - SCHOOL MANAGEMENT SYSTEM

Process	As-Is Pain Points	Gap Identified	To-Be Capability	Business Impact
Student Registration	Student details are captured manually using paper admission forms.	Manual registration leads to incomplete, illegible, and inconsistent student records.	Admin registers students electronically using standardized digital forms.	Improved data accuracy and reduced registration errors.
Student Registration	Student IDs are assigned manually by staff.	Manual ID creation may result in duplicate or inconsistent student numbers.	System automatically generates a unique Student ID for each student.	Consistent student identification and elimination of duplicate IDs.
Class Assignment	Newly registered students are assigned to classes using notebooks	No centralized mechanism exists to assign students to classes and maintain accurate rosters.	Admin assigns students to classes directly in the system, with rosters updated automatically	Faster class assignment and real-time class lists.
Class Assignment	Staff manually check class capacity and assignment history before assigning students.	Students may be assigned to full classes or to multiple classes in the same academic session.	System validates class capacity and enforces one active class assignment per student per session	Prevents over-enrollment and improves data integrity
Attendance	Manual attendance in paper registers (errors, illegible entries)	No centralized digital record	Digital attendance system (web/mobile)	Improved accuracy and record integrity
Attendance	Time-consuming roll call	No automation for attendance capture	Automated attendance marking (e.g., one-click, biometric optional)	Reduced time spent by teachers
Attendance	No real-time visibility for Admin	Lack of real-time data access	Live attendance dashboard	Faster decision-making
Attendance	Manual report preparation	Inefficient reporting process	Auto-generated attendance reports	Reduced admin workload
Attendance	Risk of lost/damaged registers	No data backup mechanism	Cloud/database storage	Data security and reliability
Fees	Manual cash handling (risk of loss/fraud)	No secure payment tracking system	Integrated digital payment system	Reduced fraud and errors
Fees	Repeated bank alert checks	No real-time payment confirmation	Instant payment verification system	Faster processing
Fees	Manual ledger entry (duplication/errors)	No centralized financial database	Automated payment recording	Improved data accuracy
Fees	Manual receipt writing	No automated documentation	Auto-generated digital receipts	Faster service + audit trail
Fees	Delayed financial reporting	Inefficient reporting workflow	Real-time financial dashboard	Better financial oversight
Fees	No transparency for parents	Lack of parent access to payment status	Parent payment portal	Improved trust and communication
Results	Manual marking inconsistencies	No standardized grading support	Digital grading system	Improved grading consistency
Results	Errors in score entry	No validation controls	Input validation rules	Reduced data entry errors
Results	Manual calculation of totals/grades	No automation of computations	Automated calculations	Increased accuracy
Results	Rework due to errors	No version control or audit trail	Result tracking & audit logs	Reduced rework
Results	Delayed result compilation	Inefficient processing workflow	Automated result compilation	Faster turnaround time
Results	Manual distribution of results	No digital access for stakeholders	Online result portal	Instant access for parents/students
Results	Limited trust in results	Lack of transparency	System-generated, traceable results	Increased credibility
Cross-Process	Heavy reliance on manual processes	Lack of automation across system	End-to-end school management system	Increased operational efficiency
Cross-Process	Fragmented data across processes	No centralized system	Unified database system	Better data consistency
Cross-Process	Delayed decision-making	Lack of real-time insights	Reporting dashboards	Improved strategic decisions
