

PROJECT SUMMARY

The School Management System Business Analysis project provides an overview of the analysis conducted to define and structure requirements for a digital solution aimed at improving school administration processes such as student registration, attendance tracking, academic reporting, and general record management.

The project delivers a complete set of Business Analysis artifacts that translate business needs into clear, structured, and testable requirements to support system development.

KEY DELIVERABLES

- **Business Case** defining the problem, objectives, and proposed solution
- **Stakeholder Analysis** with power-interest grid and engagement strategy
- **Business Requirements Document (BRD)** outlining high-level business needs
- **Functional Requirements Document (FRD)** translating business needs into system functionality
- **Process Flow Diagrams** illustrating current and improved workflows
- **User Stories** organized into epics, features, and acceptance criteria
- **Use Cases** detailing system interactions and expected outcomes
- **Requirements Traceability Matrix (RTM)** ensuring end-to-end requirement coverage
- **Data Model / ERD** defining system entities and relationships
- **Meeting Notes** capturing stakeholder discussions and requirement clarifications

FINDINGS

The analysis identified inefficiencies in manual administrative processes, including delays in record handling, inconsistent data management, and limited reporting capabilities. These gaps highlight the need for a centralized and automated system to improve accuracy and operational efficiency.

RECOMMENDATIONS

It is recommended to implement a centralized School Management System that automates key processes such as student data management, attendance tracking, and academic reporting. This will improve data accuracy, reduce manual effort, and enhance decision-making through real-time access to information.

BUSINESS VALUE

The proposed solution delivers improved efficiency, reduced administrative workload, better data consistency, and enhanced reporting capabilities. It provides a scalable

foundation for modern school operations and supports more informed decision-making across stakeholders.
